DETAILED ACTION

Applicant is advised that the Notice of Allowance mailed December 17, 2002 is vacated. If the issue fee has already been paid, applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied. If abandoned, applicant may request refund or credit to a specified Deposit Account.

Prosecution on the merits of this application is reopened on claims 1-8 considered unpatentable for the reasons indicated below:

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 3,947,689 to Wagner.

Wagner discloses (Abstract, Figures 1, 2, 6 and 8) a detector system comprising a radiation source 16 generating a beam having an area 30; and a detector 46 with a

Art Unit: 2878

cell size comparable to the beam area wherein the cell includes a single "pixel" (col. 2, line 34 – col. 6, line 61).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wagner.

Wagner fails to disclose that the detector cell includes at least two pixels or is that of a CCD detector. However, it would have been obvious for one of ordinary skill in the art to replace the image receptor of Wagner with that of a solid-state detector sized to fit the cassette holder, due to the advancement in technology, and such is well known in the art.

Claims 4-5 and 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wagner in view of U.S. Patent No. 3,904,818 to Kovac.

With direction to claims 4 and 5, the modified Wagner fails to disclose the inclusion of readout capacitor and means for transferring, multiple times, charge from the detector to the capacitor. Kovac (Figure 2) discloses a detector system that includes a plurality capacitors and means for transferring, multiple times, charge from

the detector to the capacitor. It would have been obvious for one of ordinary skill in the art to replace the detector system of the modified Wagner to provide a more enhanced readout from the detector.

With direction to claims 7 and 8, the modified Wagner fails to disclose that the plurality of transfer and readout capacitors are arranged in a specific manner. However, it would have been obvious to one of ordinary skill in the art to design the transfer and readout means as claimed as providing means of enhancing the readout of the beam and would merely require routine skill in the art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephone B. Allen whose telephone number is (703) 308-4828. The examiner can normally be reached on Monday-Thursday, 09:00-04:00.
